SET 56 – C++ Programming Language

(File Handling ,Exception handling and Multi threading)

1. Write a program to write a text in a text file for the specified path.
2. Write a program to read a file from a member function of a class in a single string and return it to main and print.
3. Write a program to concatenate two Text files and write the result in the other text file.
4. Write a program to read a text file and encrypt the file content by simple encryption and overwrite it. And again read the encrypted file and decrypt the same to store in the same position.
5. Write a program to illustrate the simple try,throw,catch to handle the exception.
6. Write a program to illustrate the simple function to throw an exception.
7. Write a program to illustrate the Simple stack unwinding.
8. Write a program to illustrate to through out of bound Exception.
9. Write a program to throw multiple exception using multiple catches.
10. Write a program to illustrate to call a simple thread function.
11. Write a program to illustrate to call two threads which keep printing the values in iterations.
12. Write a program to illustrate callable object to pass to the thread constructor for initializing a thread.
13. Write a program to illustrate the use of lambda expression.
